

FENTANYL:

WHAT DO YOU KNOW?

Saskatchewan Association of Social Workers-
Humboldt Branch Presents:

Marie Agioritis

a "Mother with Lived Experience"

In 2011 Marie's then 17-year-old son fell to the enticing power of Oxycontin, it started a four year spiral of addiction that lead to heroin use. Then without warning in 2015 her 19-year-old son Kelly, not suffering with a substance use disorder, died by accidental overdose of Fentanyl. Her efforts have inspired national laws and with sharing, Marie hopes to soften the judgements and to dispel the myths around substance use.
